HAUL OUTS AND INSPECTIONS

Our facility has two travel lifts that are rated at **60 tons** and **40 tons**. We have hauled boats up to **75 feet in length** and are limited to a beam of approximately **19 feet**.

You can call to arrange service at (T) 250-655-3222 or to schedule a haul out call 250-655-1511 and arrange a time for your boat to be hauled 6 days per week, i.e. Monday through Saturday. We offer a full service yard with technicians that are trained in all your vessels systems. We would like the opportunity to provide these services to your vessel or you can do some of the work yourself. We have some tools you can rent for the day and others are just there for the borrowing such as paint shaker, drill press etc.

Power washing the hull as it comes out of the water is recommended before blocking in the yard. This will remove excess growth and thus service to the drive train, painting the bottom or inspecting the hull for its condition will take less time and be more effective.

We now filter and remove contaminants from the wash water before it is returned to the sea. In 2009 we plan to recycle the wash water to allow its reuse and save putting it back to the ocean. During blocking ground sheets (available on site) are required to ensure the scrapings, paint etc are not dropped on the ground and washed away. All items must be disposed of in an environmentally friendly way. After blocking the boat we can review the jobs to be completed while it is out of the water. Our services include all the requirements you may have such as

1. Through hulls inspect and repair/replace
2. Running gear repairs
3. Zinc replacement
4. Bottom paint
5. Exhaust repairs/replacement
6. Repowers
7. Fuel tank and holding tank replacements
8. All Inflatable repairs
9. New heating and vacuflush systems
10. New windows, paint top sides and bright work
11. Hull repairs fiberglass, aluminum, steel and wood
12. New generator installs
13. Bottom blister repairs and spider crack repairs
14. Interior carpeting, flooring etc.

Service docks are available for work we can do in the water. Also remember if there is an issue that requires diagnosis a sea trial before haul out is recommended and should be scheduled in advance.
